

Total Care Platform (TCP)

BHW's approach to treatment is naturalistic, using everyday family routines to foster generalization of skills and to promote independence right from the start. Our programs focus on increasing each client's motivation to learn, along with making each session both fun and functional. BHW utilizes Discrete Trial Training (DTT), Pivotal Response Training (PRT), and Positive Behavior Support (PBS) methodologies as the primary framework of our programs. We also consider all scientifically-proven methods when tailoring each program to fit the unique needs of each client.

At BHW, you will experience superior personalized care and service delivery. A personal connection to each family and a commitment to each and every client is the BHW advantage.

Key Advantages

We Are at the Forefront of Technology

Progressively Utilize Multiple Technologies to Enhance Clinical Services and Workflows

We Tailor to Each Client's Unique Needs

Not a One-Size-Fits-All Approach
